

19" RACK CHASSIS FOR ANALOGUE MODEMS

GENERAL DESCRIPTION

The **RC-AM** is a 19" inch multifunctional chassis specially designed for analogue modems both dial-up and lease line like MAPPLEX, MABUX or AM-FSKR. Its compact design and connections simplicity make it very easy to install and deploy.

The **RC-AM** can be equipped with both 220Vac and -48Vdc power supplies.

In case of dialup modems with incoming calls to a single number (call group) the chassis has a jumper for each spot placed in rear panel. This jumper allows the operator to simulate busy condition on either empty slots or slots with defective modems or only originating call modems. This way the system ensures that no incoming call is delayed or lost.

When used with AM-FSKR cards the dialup RJ-11 connectors on rear panel provide continuity to the PTT relay on those cards for radio channel activation based on RTS assertion.

FEATURES

- Up to **14 Eurocard cards** (100 x 160 mm)
- 220Vac or -48Vdc power supplies available
- Different RJ-11 connectors for both dialup and lease line connections
- RJ-11connector for **PTT relay activation base don RTS assertion** (only for AM-FSKR cards)
- Jumper for **forcing busy condition**. This prevents for loosing an incoming call arriving to empty slots or non prepared slots.
