

# **102M** Gigabit VDSL2 Ethernet Extender

## Introduction

Proscend 102M is an Ultra-Speed Gigabit Ethernet Copper Extender that supports a remarkable aggregated bandwidth up to 300Mbps. (Downstream: 150 Mbps/Upstream: 150 Mbps) It delivers fiber-optic like speeds on existing copper infrastructure, enabling a good alternative in place where fiber is not economical to deploy. The 102M is equipped with a Gigabit Ethernet Port (RJ-45 connector) and one VDSL2 port (RJ-45 connector). 8 different profile settings can be flexibly selected via dip switches to suit various applications and environments. Symmetric profile can be applied as a standard Ethernet connection while Asymmetric profile can be used for other services like Video streaming or IP surveillance services which require high traffic flow in an uni-direction configuration. The 102M supports transparent LAN bridging to extend Ethernet service over UTP, Cat 5+ or Coaxial cables. With Proscend 102M's superior performance in its category, it is the best high throughput Long Reach Ethernet Extenders for service providers to deploy their IP-based networking services to meet various application scenarios.
