AI PoE Switch

FR-5N3208P/5N3010P is a new generation Power over Ethernet switch with 8-Port 10/100/1000Base-TX and 2 Gigabit uplink ports that provide stable and reliable Ethernet transmission offered by Fiberroad, with high-quality design and reliability. It can supply power to PD terminal equipment such as wireless AP, webcam, VoIP, and visual intelligent building intercom through network cable and meet the network environment that needs a high-density PoE power supply. It is suitable for hotels, campuses, factory dormitories and small and medium-sized enterprises.

Main Features

- ❖ 8x10/100/1000Base-TX RJ45 ports, 2xGigabit SFP/ RJ45
- ❖ Support full-duplex based on IEEE802.3x and half-duplex based on backpressure
- ❖ IEEE802.3af/at PoE standard, without damaging non-PoE devices.
- ❖ Support 9K bytes giant frame, compatible with various extension protocol
- ❖ Support IEEE802.3az Energy Efficient Ethernet technology
- ❖ Electric 4kV surge protection
- ❖ Fanless and noiseless design, IP30 rated protection
- ❖ Plug and play, no configuration, simple and convenient
- ❖ Providing a long term and stable PoE power output
- ❖ The user-friendly panel can show the device status through the LED indicator of PWR, Link, PoE

AI PoE Switch used on all devices which are compatible with the PoE standards but don't support passive low voltage devices. It is also important not to let the power requirements of your devices exceed the total PoE budget of the switch when planning your installation. All models support Artificial intelligence features via dip switch and include, AI VLAN, AI QoS, AI PoE and AI Extend. Let's explore these in a little more detail.

AI PoE: The AI PoE feature allows the switch to check the ports for activity periodically. If a port is not passing traffic for a certain amount of time, the switch will reset power on that specific port.

AI QoS: When AI QoS is enabled on the 4 and 8 port models, all ports will prioritise Video and VoIP traffic flows over others.

AI VLAN: AI VLAN is essentially port isolation on each of the PoE ports. All PoE ports are only able to communicate with the uplinks when this option is enabled.

AI Extend: AI extend is a common PoE switch feature designed to extend PoE distance up to 250m. The downside is that port speeds will be limited to only 10Mbps.

Precautions

To avoid damage to the equipment and personal injury caused by improper use, please observe the following precautions:

- ❖ Keep the power off during installation, wear an anti-static wrist, and ensure that the anti-static wrist is in good contact with the skin to avoid potential safety hazards.
- ❖ The switch can work normally under the correct power supply. Please confirm that the power supply voltage matches the
- ❖ voltage indicated by the switch.
- ❖ Before powering on the switch, please make sure that the power circuit is not overloaded, so as not to affect the normal operation of the switch and even cause unnecessary damage.
- ❖ To avoid the risk of electric shock, do not open the case while the switch is working, even if it is not charged, do not open it yourself.
- ❖ Before cleaning the switch, pull out the power plug of the switch. Do not wipe with a wet cloth. Do not use liquid to clean it.
- ❖ The equipment installed in the rack is generally from bottom to top to avoid overload installation.
- ❖ Avoid placing other heavy objects on the surface of the switch to avoid accidents.
